

Supplemental Appendix:
White Racial Identity and Preferences for (Non) White
Immigrants in the United States

Supplemental Appendix A: Detail on Variable Coding & Creation (pp. 1 - 7)

Supplemental Appendix B: Various Supplemental Analyses (pp. 7 - 9)

Appendix A

The following pages provide information on how each variable (in Table 2 in the main paper) was created and coded. Additional information on the Voter Study Group (VSG) panel, including the codebook and data in Stata format are available at the following link. <https://www.voterstudygroup.org/data/voter-survey>. I will also make all data publicly available for replication in the Harvard Dataverse upon acceptance for publication.

Variable Creation & Coding

All descriptive statistics and sample sizes are for the unweighted data and for my sample of non-Hispanic White Americans (survey respondents who self-identified as White in 2016, 2017, and 2018). The variable names in italics refer to the name in the VSG data.

- Support for Immigration - Europe

Measured in 2018

Created from *immi_region_eur_2018*

Coded as follows: 1 = decreased; 2 = kept the same; 3 = increased

Mean = 1.96; Standard Deviation = 0.58; Min = 1; Max = 3

Valid N = 3,713

- Support for Immigration - Africa

Measured in 2018

Created from *immi_region_afr_2018*

Coded as follows: 1 = decreased; 2 = kept the same; 3 = increased

Mean = 1.74; Standard Deviation = 0.61; Min = 1; Max = 3

Valid N = 3,714

- Support for Immigration - China

Measured in 2018

Created from *immi_region_china_2018*

Coded as follows: 1 = decreased; 2 = kept the same; 3 = increased

Mean = 1.72; Standard Deviation = 0.60; Min = 1; Max = 3

Valid N = 3,718

- Support for Immigration - India
 - Measured in 2018
 - Created from *immi_region_india_2018*
 - Coded as follows: 1 = decreased; 2 = kept the same; 3 = increased
 - Mean = 1.79; Standard Deviation = 0.60; Min = 1; Max = 3
 - Valid N = 3,705

- Support for Immigration - Mexico & Latin America (labeled as “Mexico”)
 - Measured in 2018
 - Created from *immi_region_latin_2018*
 - Coded as follows: 1 = decreased; 2 = kept the same; 3 = increased
 - Mean = 1.68; Standard Deviation = 0.65; Min = 1; Max = 3
 - Valid N = 3,715

- Support for Immigration - Middle East (labeled as “Mideast”)
 - Measured in 2018
 - Created from *immi_region_mid_2018*
 - Coded as follows: 1 = decreased; 2 = kept the same; 3 = increased
 - Mean = 1.55; Standard Deviation = 0.63; Min = 1; Max = 3
 - Valid N = 3,715

- White Identity
 - Measured in 2017
 - Created from *race_importance_2017*
 - Higher values = stronger White identity
 - Originally ranged from 1-5; re-scaled to range from 0-1
 - Mean = 0.40; Standard Deviation = 0.35; Min = 0; Max = 1
 - Valid N = 3,671

- Partisanship
 - Measured in 2017
 - Created from *pid7_2017*
 - Higher values = stronger Republican identification
 - Originally ranged from 1-7; re-scaled to range from 0-1
 - Mean = 0.51; Standard Deviation = 0.36; Min = 0; Max = 1
 - Valid N = 3,683

- Ideology (not sure/moderate = midpoint on 5-point scale)
 - Measured in 2017
 - Created from *ideo5_2017*
 - Higher values = stronger conservative identification
 - Originally ranged from 1-5; re-scaled to range from 0-1
 - Mean = 0.55; Standard Deviation = 0.28; Min = 0; Max = 1
 - Valid N = 3,717
- Trump Attitudes (index constructed from two variables)
 - Measured in 2017
 - Created by summing *trumpapp_2017* and *fav_trump_2017*
 - Higher values = greater Trump support
 - Originally ranged from 2-8; re-scaled to range from 0-1
 - Mean = 0.44; Standard Deviation = 0.43; Min = 0; Max = 1
 - Valid N = 3,607
- Authoritarianism (index constructed from four variables)
 - Measured in 2016
 - Created by summing *sc1_independent_2016*, *sc2_curiosity_2016*, *sc3_obedience_2016*, and *sc4_considerate_2016*
 - Higher values = greater authoritarianism
 - Originally ranged from 2-8; re-scaled to range from 0-1
 - Mean = 0.47; Standard Deviation = 0.34; Min = 0; Max = 1
 - Valid N = 3,193
- Egalitarianism (index constructed from four variables)
 - Measured in 2017
 - Created by summing *egalitarian_opportunities_2017*, *egalitarian_worryless_2017*, *egalitarian_chance_2017*, and *egalitarian_fewerproblems_2017*
 - Higher values = greater egalitarianism
 - Originally ranged from 4-20; re-scaled to range from 0-1
 - Mean = 0.59; Standard Deviation = 0.27; Min = 0; Max = 1
 - Valid N = 3,644

- Nationalism (index constructed from three variables)
 - Measured in 2016
 - Created by summing *usa_becitizen_2016*, *usa_ashamed_2016*, and *usa_belikeus_2016*
 - Higher values = greater pro-USA nationalism
 - Originally ranged from 3-15; re-scaled to range from 0-1
 - Mean = 0.59; Standard Deviation = 0.23; Min = 0; Max = 1
 - Valid N = 3,682

- Populism (index constructed from four variables)
 - Measured in 2017
 - Created by summing *expert_trustordinary_2017*, *expert_facts_2017*, *expert_help_2017*, and *expert_struggle_2017*
 - Higher values = greater populism
 - Originally ranged from 4-16; re-scaled to range from 0-1
 - Mean = 0.40; Standard Deviation = 0.21; Min = 0; Max = 1
 - Valid N = 3,616

- Social Trust (index constructed from three variables; “don’t know” = midpoint)
 - Measured in 2016
 - Created by summing *people_trust_2016*, *people_helpful_2016*, and *people_fair_2016*
 - Higher values = greater social trust
 - Originally ranged from 0-6; re-scaled to range from 0-1
 - Mean = 0.49; Standard Deviation = 0.40; Min = 0; Max = 1
 - Valid N = 3,704

- Local Economy - Satisfaction
 - Measured in 2017
 - Created from *satisfaction_localeconomy_2017*
 - Higher values = greater satisfaction
 - Originally ranged from 1-5; re-scaled to range from 0-1
 - Mean = 0.60; Standard Deviation = 0.27; Min = 0; Max = 1
 - Valid N = 3,676

- Personal Income - Satisfaction

Measured in 2017

Created from *satisfaction_income_2017*

Higher values = greater satisfaction

Originally ranged from 1-5; re-scaled to range from 0-1

Mean = 0.55; Standard Deviation = 0.31; Min = 0; Max = 1

Valid N = 3,673

- Age

Measured in 2018

Created by subtracting *birthyr_2018* from the number 2018

Measured in years; higher values = person is older

Mean = 61.0; Standard Deviation = 17.9; Min = 25; Max = 93

Valid N = 3,739

- Female

Measured in 2018

Created from *gender_2018*

Coded as follows: 0 = male; 1 = female

Mean = 0.52; Standard Deviation = 0.50; Min = 0; Max = 1

Valid N = 3,739

- College

Measured in 2018

Created from *educ_2018*

Coded as follows: 0 = no HS/High school graduate/Some college/2-year; 1 = 4-year/Post-grad

Mean = 0.41; Standard Deviation = 0.49; Min = 0; Max = 1

Valid N = 3,739

- Married

Measured in 2018

Created from *marstat_2018*

Coded as follows: 0 = Separated/Divorced/Widowed/Never married/Domestic or civil partnership; 1 = Married

Mean = 0.62; Standard Deviation = 0.49; Min = 0; Max = 1

Valid N = 3,739

- State Fixed Effects

Measured in 2018

Created from *inputstate_2018*

Coded as a series of 51 dummy variables (Alabama, Alaska, Arkansas, etc.)

Valid N = 3,739

Variables used in the Supplemental Analyses (see the “Robustness of Main Findings” section in the manuscript)

- White Identity (measured in 2016)

Measured in 2016 instead of 2017

Created from *race_importance_2016*

Higher values = stronger White identity

Originally ranged from 1-5; re-scaled to range from 0-1

Mean = 0.43; Standard Deviation = 0.35; Min = 0; Max = 1

Valid N = 3,710

- Feeling Thermometer - Black People

Measured in 2017

Created from *ft_black_2017*

Higher values = warmer feelings

Originally ranged from 0-100; re-scaled to range from 0-1

Mean = 0.70; Standard Deviation = 0.24; Min = 0; Max = 1

Valid N = 3,606

- Feeling Thermometer - Asian People

Measured in 2017

Created from *ft_asian_2017*

Higher values = warmer feelings

Originally ranged from 0-100; re-scaled to range from 0-1

Mean = 0.74; Standard Deviation = 0.22; Min = 0; Max = 1

Valid N = 3,592

- Feeling Thermometer - Hispanic People
 - Measured in 2017
 - Created from *ft_hisp_2017*
 - Higher values = warmer feelings
 - Originally ranged from 0-100; re-scaled to range from 0-1
 - Mean = 0.69; Standard Deviation = 0.24; Min = 0; Max = 1
 - Valid N = 3,594
- Feeling Thermometer - Muslim People
 - Measured in 2017
 - Created from *ft_muslim_2017*
 - Higher values = warmer feelings
 - Originally ranged from 0-100; re-scaled to range from 0-1
 - Mean = 0.48; Standard Deviation = 0.31; Min = 0; Max = 1
 - Valid N = 3,506

Appendix B

The following pages present results from additional models associated with the “Robustness of Main Findings” section in the manuscript. These are (Table B1) analyses that use a 2016 measure of White identity rather than a 2017 measure and (Table B2) models that include, for the five non-European immigrant groups, a measure of “out-group” attitudes based on 2017 feeling thermometer ratings (of Black People, Asian People, Hispanic People, and Muslim People).

Table B1: White Identity and Support for Allowing Various Groups to Immigrate, When Measuring White Identity in 2016 rather than 2017

	DV = Support for Immigration (ranges 1-3; measured in 2018)					
	Europe	Africa	China	India	Mexico	Mideast

Note: Dependent variables are measured in 2018 and asks about preferred immigration allowance from different countries/regions of the world (1 = decrease; 2 = keep about the same; 3 = increase). All independent variables (except for age, gender, education, marital status, and state fixed effects) are measured in 2016 or 2017 and range from 0 to 1. Sample consists of Americans who identify as White, non-Hispanic (in 2016, 2017, and 2018). Ordered probit coefficients with robust standard errors clustered by state in parentheses. *** p<0.01, ** p<0.05, * p<0.1, two-tailed test. Source is the VSG Panel Study.

Table B2: White Identity and Support for Allowing Various Groups to Immigrate, When Controlling for Specific Out-Group Attitudes

	DV = Support for Immigration (ranges 1-3; measured in 2018)
